

Opeeka's Person-Centered Intelligence (P-CIS) carefully shares pertinent information about co-served people across agencies

Services work together and people are healthier and safer

People in care control what is shared

Substance Use Programs

Example:
 Can access physical health and prescription information when it pertains to care

Hospitals

Example:
 Can access family contacts and medical information when patient presents without ability to communicate needs or history

Justice

Example:
 Can access contact information for natural supports and clinician during interactions

Easily access Answers (A) to Questions (Q) about people also served by other agencies

Person-Centered Data

Health and Human Services

Example:
 Can access hospitalization information when it relates to care

Behavioral Health / Mental Health

Example:
 Can access substance use information when co-served

Social Services

Example:
 Can access behavioral / mental health information when it relates to care

Care is coordinated

Nobody must tell their story twice if they don't want to
