CareLogic Analytics Advanced

Optimal Reporting and Analytics for Actionable Insights

Data driven provider organizations need actionable insights to make informed decisions that boost productivity, optimize revenue, and improve care outcomes. CareLogic Analytics Advanced is a powerful yet user-friendly reporting and analytics tool that takes the burden and complexity out of building custom reports and dashboard visualizations.

CareLogic Analytics Advanced improves access to operational, financial, and clinical data to monitor and improve performance. See trends, aggregated data, as well as get specific details in formatted reports to support daily operations.

• Drive better quality outcomes with access to trending of population-level data and individual client data.

• Support future strategic planning for quality, compliance, and revenue by supporting executives' decision making with current and trending graphical data.

• Improve reimbursement and revenue by more easily viewing financial outcomes and uncovering revenue cycle inefficiencies.

Best In Class Business Intelligence and Reporting

CareLogic Analytics Advanced is a robust self-service solution that leverages two industry leading business intelligence and reporting tools to enable organizations to meet their specific data and reporting needs as well as to help them monitor and manage performance.

• The analytics tool allows organizations to create their own dashboards and data visualizations using drag and drop features that can be embedded in CareLogic.

• The reporting tool allows users to create their own formatted and pixel perfect reports using a report.

CareLogic Analytics Advanced

CareLogic Analytics Advanced provides the flexibility to meet data demands, and further positions your agency to thrive in a value-based care model by promoting a performance-based culture driven by data and analytics.
